

### WHERE TO USE TRIM

Chris highlighted the cabinets throughout his outdoor kitchen with GenStone trim.

Each trim piece is 42" long and can be cut to size with a hand saw.

Trim can also be used to finish the edge of a wall rather than cutting a panel flush or using a finished edge piece.

### ALTERNATIVE TO TRIM

Some customers choose to terminate the panels directly into windows, doors and other voids in the installation area.

If you opt for this method, be sure to paint the edges where the cut was made.
